

The implementation of e-bug in Germany

A teacher's view in a federal country of 16 states

Struggle for implementation of e-bug in Germany:

- Each of the states with own strategies.
- Need for free accessible material.
- No national curriculum
- Not necessary for final exams.
- Hygiene is not a priority in public awareness.

Challenge:

Providing institutions with specific information:

- National Health Institution: www.bzga.de
- Addressing each of the states health institutions
- Addressing each of the states education authorities and CPD institutions
- Teacher are free to choose appropriate material and methods
- Textbooks do not focus on hygiene - we are a „clean country“ :-)

What is necessary to do:

- School partnership with local health institutions
- School partnership projects from abroad should ask for this topic to open discussion and awareness - it is part of our culture.
- Conferences on Hygiene should address Education Authorities.
